

LISTINGS OF THE CLAIMS

Please amend the claims:

1. (Currently Amended) An input circuit of a television tuner, comprising:
 - a first input terminal to which a television signal is input;
 - a second input terminal to which an FM broadcasting signal is input;
 - an input tuning circuit tuned to the television signal and the FM broadcasting signal,
 - wherein the first input terminal is connected to an input end of the input tuning circuit; first and second diodes serially connected between the second input terminal and the input end of the input tuning circuit and simultaneously switched on or off,
 - wherein the first diode is input to the input end of the input tuning circuit, and
 - wherein the second diode is provided at a side of the second input terminal;
 - an inductance element interposed between the second input terminal and the second diode; and
 - a first capacitance element that forms a low pass filter together with the inductance element when the second diode is switched on and is connected between a connection point of the first diode and the second diode and a ground;
 - an FM trap circuit provided between the first input terminal and the input end of the input tuning circuit for attenuating an FM broadcasting band; and
 - a fourth diode connected between the connection point of the first diode and the second diode and an input end of the FM trap circuit, wherein the fourth diode is switched on or off simultaneously with the first, second, and third diodes.
2. (Previously Presented) The input circuit of the television tuner according to Claim 1, further comprising
 - a third diode that is switched on or off simultaneously with first and second switches and is interposed between the inductance element and the second diode; and
 - a second capacitance element that forms a low pass filter together with the inductance element and the first capacitance element when the second and third

diodes are switched on and is connected between a connection point of the second diode and the third diode and the ground.

3. (Cancelled)

4. (Currently Amended) The input circuit of the television tuner according to Claim 13, further comprising a transistor whose emitter is grounded and whose collector is pulled up to a power supply voltage by a feed resistor,

wherein cathodes of the first, second, and fourth diodes are connected to each other,

wherein anodes of the second and third diodes are connected to each other,

wherein a bias voltage lower than the power supply voltage is supplied to the anodes of the first, second, third and fourth diodes,

wherein the cathodes of the first, second, and fourth diodes are connected to the collector of the transistor through a common first resistor,

wherein a cathode of the third diode is connected to the collector of the transistor through a second resistor, and

wherein the transistor is switched on or off.
